CONTACT WITH THE GUARDIANS ("DISC PEOPLE")

(Note: The following is a transcription from stenographic notes taken at Palomar Gardens, January 3, 1953. About a dozen people were present and the conversation lasted some three hours; it was therefore impossible to record all the comments. Abbreviations used represent the following persons: "Dr.W." for G.H. Williamson, D.Sc. "F.O." for Mr. Francis Ohm, business executive. "G.A." for 'Professor' George Adamski, (investigator). "Dr.N" for Dr. Scott Nearing (economist and writer). "Sgt.B" for Sgt. Baker of the Air Force. "C.H." for Professor Karl Hunrath (magnetics). "M.L." for Meade Layne, BSRA Director. "Q" for question or comment.

Adamski: The photographs are not yet thoroughly analyzed. Might be the key to the footprints. No other landing was made but another ship came through on the 13th of December; it did not really land but hovered about 12 ft. off the ground. The story will be released tomorrow. I just took the picture. On the first landing I was too close to the ship and my arm was jerked by the power. What was said at that time I cannot yet give out. The reason the press is so backward is that they get kickbacks. There will be a later follow-up on this. On the second appearance the distance was less than half a mile on the road side and coming in it was not quite a mile and a quarter. The measurements were taken in the last two weeks. The mother ship appeared and a B-36 came orbiting it while the others (planes) were watching. At this time there were 12 foot prints left there but no plastic made up so they were ruined.

(G.A. apparently means that the distance between his party and the contact point was much less by airline than by road. ML)

Q... Were there two kinds of footprints?

G.A. Two sets. Mine showed but his were deeper. He came from the ship and walked up to me and we stood and talked, then we walked back so there were two sets of prints. Mine were lighter but they were definitely there. He told me not to go near the ship. I was not excited. You would be amazed at the power there. I am not afraid of man, God or the devil; this man stood about 5' 6" but still in the time we stood there I felt like a two-year old kid standing before a Deity. And that feeling stayed with me. I had seven plates in my pocket, exposed previously, and I transferred these plates to another pocket but it was too late. That was because the magnetism was different than the kind we know about. He told me to stay away but to ask all the questions I liked, and he was answering me and I moved over. When I came near the ship my arm was thrown up and hit against the rim of it and was paralyzed for nearly three days. Even today I haven't the feeling in it that I should have. I get pain now and then but the arm is not radioactive. I realized about the plates and pulled them out and transferred them to the other side but it was too late. When I did this he took one plate, (already exposed), and made me understand he would get it back to me, but how and when he did not say. He tried to enter but B-36's were around and chasing him all night long. I did not know it was he at the time but I thought it was. I set up my telescope a quarter of a mile from the well so I could get a good shot at him and that is where the pictures came in. He had to come in and hover in order to drop the plate. That is the plate that is returned with the original film and one can see how he nullified my picture. There had to be a picture of some kind on it, even if a bad one. We developed it and the code writings on it are beautiful and we are just now getting around to analyzing it. There is a message on it but I do not know what it is. Concerning the footprint messages, Dr. Williamson has the sketches. We have made moving pictures of the foot prints as well as stills.

The analysis is being made and the message will be powerful. Everybody says, why don't they land? They are just as solid human beings as you and I. The Air Force does not question it. That is the odd part of it. They should have been here but they didn't even bother. When the Cleveland Plain Dealer was contacted they said it was an old story. Then it is very odd that Major General Stanford comes out on Christmas morning that landings were possible, but did not say that they had taken place. It is odd because I have several letters from Washington on that landing and they are capable of going to the Pentagon itself. Not only that but we have a documentation here that 32 men from Orion, smaller than my man, came and ate in a cafe in Nevada. I have that document.

Q-- Where did they come from?

G.A. From Orion. They have landed several times. This is the only contact I have had but I cannot question the integrity of the authority that gave me this information. If we could realize the message --

F.O. -- This plate you had - that is the one that was returned?

G.A. Yes, but no more can be released.

F.O -- You say there are persons in power who would not like it to come out?

G.A. You are right. We human beings always like the gravy or the cream. But if you ask, is it all good, I say no. We get the sour with the sweet. Their purpose is is good. It is up to us.

M.L. - Is the content of this message concerned with internal conditions of the globe?

G.A. - Yes but not to the degree that they would stop us from destruction.

M.L. - Do conditions include deep-lying disturbances within the planet?

G.A. The only disturbance they are concerned with is our explosives. If the cosmic ray is only powerful in outer space then they are going to gather that which is equally powerful.

M.L. - (to Dr. Williamson): You mentioned radio contacts.

Dr. W. I recently returned from Minnesota and Canada, and I noticed while working among almost all of our Indian tribes that they had legends of the saucers. They called them earth rumblers. I asked if they meant they made a noise. I have not seen any but was told that they were noisless. In a religious meeting (they are not Christians) when I mentioned the rumblers, they left. I was told not to mention them because they were mentioned only in closed circles or to one's self, not to other people. The Indians talked about their coming in over lakes, like whales, and always in circular form. They spoke of legends in the past, even when the colonies were being formed, which said that these things would land (though they never used the word land). They said it was not good to talk about these beings, but that they had given us help and wisdom - but that since the white man came they did not come around any more.

In our notes we have a tremendous amount of maferial concerning saucers. In talking with a friend I said I did not know a thing about radio, but it seems that these things are being piloted by beings of some kind. And even with our own knowledge we can crack codes. An interesting fact about the Gazette article - the editor said he couldn't understand how the man could understand English and speak a little of it. I said that seemed easy to explain. Let us suppose that I came into your group as an anthropologist, and none of you understood English and I understood none of your language. After a few months I would begin to understand your conversations and before long I would be able to speak it. So, they can do it, and they have been here longer than that. They must have radio apparatus. When Mars came very close about 14 years ago, we had radio silence for about 10 minutes.

F.O. We have records on that.

Dr. W. Yes. There was another man who was interested in developing radio and he received code on how to do so. I asked, why not use regular code? Even in their own code what do you have but dots and dashes?

F.O. How long ago?

Dr. W. August 1952. They tried for about a week and nothing happened. He was not trying to make contact with planets but with ships in the atmosphere. Finally they called me and said that some very unusual things were happening; so we went to their place. Some of the things definitely prove telepathy.

ML. I don't understand. In what way?

Dr. W. I'll get to that. We were not experimenting. This radio man said it came so fast he could hardly get it. He was getting International Morse code and it had many blanks because it was so fast and because he was excited. He thought it might be a hoax. But when he was on one meter band he asked a question and then switched to another band and immediately got an answer.

F.O. No one playing a hoax could have done that.

Dr. W. No, not with such fine tuning. It proves either that they use telepathy or have a very wide band and can hear anything. He told me they began to believe it was not a hoax. He checked with his superiors and it did not look like any hoax. He asked the unknowns for a sign - said, if you are willing totalk to us, give us a sign. They said to look for something to happen in the heavens, something about the sun which would happen at noon. And this was in fact noted by observatories.

One evening we were working on a problem in anthropology, not trying for telepathy. We had quit radio but had left it on. We were all thinking about this problem and the radio came in and answered it. We had never sent it out by radio.

G.A. That was before you heard of me?

Dr. W. Yes. I had never heard of you. I do not read science fiction and had never heard of Professor Adamski except later through pictures of the saucers and space ships. I had not met Karl Hunrath either.

G.A. There are several workers in the magnetic field who are coming out here and we intend to establish a center. Flying saucers are a minor problem in the whole thing and it has to be handled cautiously. I do not know the forces they are using. But as far as their being hostile, they are not. There is no reason why they should not have used the power they have if they are hostile.

F.O. Do they have a reason for contacting you?

G.A. Yes, but I cannot tell you what it is, at this time. But I do know what my reason is, ever since the Navy got me started. They asked me to help them out and then tried to use me as a scapegoat. But I kept working with a few people who knew me well to find out the facts about these things. To jump to conclusions or misconstrue facts would do plenty of damage to the very thing we want. As Dr. Layne said there is monoxide gas on Venus and this disc man was not from there. But the atmosphere on Venus is the same as here and their time is the same. They have an overcast like an overcast day here. All the planets of our system and of other systems too are capable of maintaining us should we get there. * This print here was made from the returned plate. The Disc man took it on the 20th of November and brought it back on the 13th of December. It was 10.2 miles from here on the road to Parker and

---

Note: The paragraph "yes,but" to the asterisk * is unclear in the transcript and apparent contradictions will have to stand for the time being. ML.

Needles. Sergeant Baker of the Air Force took a picture of the ship returning the plate. It looks like a huge ball with three round landing gears. I believe things are moving to a climax because this is 1953, but it's really the 2013 year because we have fouled up our timing. I feel sure there will be terrific changes and maybe a terrific war too. I think we are headed for an upset.

M.L. Political? Social? Forces of Nature?

G.A. It will be our own doings, our own choice. I think there will be plenty of wreckage this time.

M.L. Planetary conditions?

G.A. Roughly, yes. But I think war, because things are tending that way. We should watch the handwriting on the wall. We are planning to quit donating to the UN, which means it is moving to a foreign land. General Motors is making tanks. The pyramid prophecies also point to 1953, or 2013. We have already separated ourselves from the totality and we must face men as they are. Men do not develop partly because they are too busy earning a living. Pain will sometimes wake them up. Man has to learn the hard way.

Dr. W.

I might say this much about the radio - one thing definitely ties in with the desert contact with the space man. In these radio contacts we were told to visit Prof. Adamski.

F.O. Yes, we understood you had gone on a picnic ...

G.A. Rick came down here and talked to me and he said, whenever you go we would like to be there. I got an impression to go and notified them by telephone. The mother ship gave instructions as to how to go. It went just ahead of us and we followed it. It stopped and turned and we picked up the instrument and she stayed there - that was where she (the mother ship) wanted us to be. The other one (the Disc) was already sitting there.

F.O Were there big indentations there?

G.A. The Disc did not come clear down, it was off the ground. That is how my arm got burned.

F.O. It seems most unusual that they should have a shoe with such markings. (This refers to the sandal prints left at time of the first contact. ML).

G.A. Not unusual but probably arranged previously to to give a message. As to that woman in the ship - the ship was translucent. The figure might have been a man but looked somewhat like a woman. The stuff the ship was made of was hard as the devil. As Dr. Hubbell says, the earth is duplicated many times in space. Highly intellignet - people could be landing here.

F.O. Such people could be here and we would not know.

G.A. That is true - we would not know. F.O. Do you suppose there are?

G.A. I know there are. I had people from Holland here who know about that. All the governments in the world are holding back this information. It is held back by bigger powers than religion. Once it is known our economy will tumble. The Air Force has to be careful but the AF is not a major Power. What I am speaking of is the economic system. The kind of thing that prevented television for fear of knocking out the movies. Do you think if I could produce a machine to get power from space I would find my ideas accepted?

M.L. (to Dr.W.) Communication by radio would be possible for anyone who could operate a radio and wanted to try for it?

Dr. W. Our radio man asked that? Why are we so special? Why haven't men of world

renown been contacted? They say it is for any man who desires the truth.

G.A. I know a man who heard a voice telling him to get off the wave length.

M.L. So far as you know they have been using International Morse?

Dr. W. Yes. I don't understand code but from the messages we received and from our radio man and others (he wasn't alone in this) there have been other signals.

Q. -- I should like to point out that when all radio transmitters were cut out in order to receive any possible communications from Mars, a message was received in code which has never been deciphered.

Dr. W. It wasn't International and in fact it wasn't Morse. We heard them and they were talking to each other (i.e., recent; not 'Mars messages'. ML).

G.A. Back in 1925 and 1928 there was a German and a British scientist who had communication from and with Mars. There was a statement made on the radio two weeks ago that there are space radios operating toward the earth right now, and very intelligently handled. It gave no other information. You could take it either that there are space platforms or that they were coming from another planet. And there are many things going on about our own government which cannot be stated in lack of definite proof. It is better not to speculate.

ML (to Dr.W.): About the content of the messages received by you - ?

Dr. W. When you mentioned the code, it reminded me - once we got a voice. The voice told us to go to another frequency. I cannot tell what was said but it lasted for 30 or 40 minutes. At the time we were not too sure but we got verification of it.

M.L. Could you say anything about its general nature.

Dr. W. I can say this much, it was not belligerent. I can say it was an appeal.

M.L. Didthey say where they came from?

Dr. W. Not the voice, no. Besides, there are other systems, not only ours.

F.O. These bands you operate on - what are they?

Dr. W. I cannot say. But one man talked to Mr. Bailey and he told him it did not matter what band you operate on.

G.A. They use not only short wave but you can expect anything to happen on long wave also. They are capable of modulizing our air waves. As to speaking our language, what is to stop them from learning it and teaching others about it?

ML. Has there been any suggestion in your contacts of any disagreement or conflicting intentions among these visitors?

Dr. W. No, there seems a great unification. The fact that there are space ships in the air is insignificant when other facts come out.

G.A. Unification can be in two fields, for harm or good. We are not too good but we are not the worst. I would not be too quick - I would be on the alert.

ML. From our sources of information we have gathered that these people are what are known as Guardians and their duties extend throughout the solar system. Do you know anything that conflcits with that?

Dr. W. No. The contacts we had only mentioned the bodies they were from, but there was the idea all the way through of a brotherly feeling toward each other.

G.A. I think Layne asks from a universal point of view. If I understand you there is a tribunal in our system.

ML. Are they natives of any particular body in space?

Dr. W. I cannot say that.

ML. Did they give you the impression they are natives of Venus or Mars?

Dr. W. Yes, we got the impression they are inhabitants of other bodies, but names were identified, not where they were from..

ML. We have had this statement, that when Mr Adamski's space man gave the impression that he came from Venus he was only generalizing as to a general direction.

G.A. I can answer that. It was not a generalization. I wanted to know where he was from and if I get a mental picture of what I want to ask I get an answer to it. In this case I pointed to the sun and said, "Are you from Venus?" I pointed to thesun and made the second and third orbit. He understood I meant the earth. Then he pointed to the sun and then the second orbit.

Dr. W. There are other indications too that show he was from Venus.

G.A. When I was uncertain I made him repeat. I got it pretty straight.

ML. Then they were not giving a generalidea only.

Dr.W. That is right. Also I did some research on symbols and we can say they came from Venus.

G.A. How could you be sure that even the symbols would read Venus when you do not know the other systems?

ML. All the planets are represented in the symbols.

Dr. W. In the footprint messages? ML: yes, and in others.

Dr. W. There are planetary bodies represented and drawn to scale so you can tell which is which.

ML. If the man pointed toward Venus he would be indicating a definite line.

Dr. W. No, I got the definite impression he meant Venus. We had some indication through Venus also.

Dr. Scott Nearing: Is there any suggestion of random or chance, or of definite plan and purpose. Are they here under a unified plan?

Dr. W. Yes, there is an over-all plan.

Dr. N. And this plan includes the whole picture of the saucers. It has been thought out as a general would think out a campaign.

Dr. W. Yes, but not in the military sense. We are all part of the One.

G.A. Let me answer it this way. There is a unified system but still you cannot overlook lesser bodies. And we're all involved in the same thing provided we're willing to listen and go along. You cannot educate a person unless he is willing to be educated. I would say that that kind of system exists and is well coordinated.

ML. Do you get the impression that these space people have been trying for some time to make contact here? Dr.W.- Trying to find people of receptive minds, yes.

ML. So a satisfactory contact having been made, does their plan include a broadening of this? Dr.W. Contact is a definite step on the way.

ML. Will there be other messages? Dr.W. I do not know. But in the radio contact,

ML. Do you get these at any time or only when you try for them? yes?

Dr. W. I cannot say.

Dr.N. Do you know if any contact has been made in China or Chile or Spain?

Dr. W. I do not know.

Dr. N.

In Russia? Dr.W. I had no indication of it.

G.A. I would say yes. Not too long ago some 1700 (discs) went over Vladivostok. Our people who have been giving out information have been criticised and psycho-analyzed and others have kept their mouths shut. In Russia they tell the Government. But these contacts with common men date back 7000 years. Why should we expect something different now?

ML. How far would you agree with this? The basic cause of this visitation doesn't lie in human conduct so much as it does in changing cosmic conditions. There is a widening between the island universes, consequently a change in magnetic (or etheric or gravitational) stresses. Such changes release the internal pressures of the globe so that violent seismic disturbances will result. The present interest of the Guardians is largely in studying these terrestial conditions.

G.A. I can give you scientific sources to support that. We have reports of a daily shifting of one degree (in compass variation?) so that various instruments have to be readjusted by one degree daily. -- I think about the first of the month (Feb,) you will find a great upset with reference to Frank Scully, who willbring suit against certain magazines, and Silas Newton, who is the second top man in the magnetic field.

Dr. W. I do not believe we will go to 1955 without an economic crack-up. But war could do it too. But brightness is behind the cloud.

F.O. Out of chaos? We can make a mess of it. The A.F. and the military have made us disgusted - make the Disc people disgusted with us -

G.A. If ever they go to the full extreme we will get the worst of it.

ML. Does the radar beam have any effect on the Discs?

G.A. No, because the Disc is capable of becoming a second power. If radar could disturb them it would have been noted before now.

One force will nullify another. Use a force slightly above that and you are travelling free space. At any speed - you would not know you were moving. But space itself is moving. They just sit on it and direct their course by magnetic beams. That is what the hovering is.

F.O. Did you ask directly to go to his ship?

G.A. He did not exactly deny me but he did not want me to go in and I could see why. All the time our own ships (planes) were out there. If I had gone in they might have thought he was capturing me. I do not know where our planes came from but they were there.

ML. (to Dr.W): Do you intend to carry on with your radio experiments?

Dr.W. That is difficult to answer. I would be interested, but it would depend on on them.

STATEMENT FROM DR WILLIAMSON: I confirm my presence as a witness in the contact with a man from Venus near Desert Center, Calif. I have not in any way, shape or form been associated with the so-called second contact. I was of the assumption we had cleared all the questions which were brought forth the afternoon you visited us. I do not choose to reveal any more than has already been given you."

(Excerpt from letter, Dr. G.H.Williamson to Meade Layne, Jan.7 1953.

EXCERPTS FROM LETTER - George Hunt Williamson, Sc.D., to BSR Director, M.L.

Thank you for your letter, since I am most anxious to be of help to anyone who desires the truth in this matter. This knowledge is not for a select few but for the people of the world... I am not on the faculty of the University of Arizona. I refer you to The Monthly Supplement - Who's Who and Who Knows, July 1952. I arrived back in Arizona last March after a long period of field work in Canada and Northern U.S. ..

Because of the desert contact we now are in possession of information relating to atmospheric conditions on various planetary bodies, on the earth at the present time, and events to transpire in the near future. The Gazette Article left out much valuable information. For one thing, another person did see the Space Man besides Prof. Adamski. Soon after I observed the small "saucer" come close to earth near his telescope, I also saw someone standing near him and apparently talking with him. (This was observed through field glasses).

As far as the footprints are concerned, there is no question that they are genuine. The first drawings made for the Gazette were of necessity quickly done. Since that time, under excellent laboratory conditions, I have re-examined the plaster casts and field notes and drawings. Many more smaller symbols have come to light...

I affirm that there were also other individuals connected with the desert contact who have not as yet been revealed; also that I was present at the desert contact; saw the mother craft and the smaller "saucer" come in and leave; saw another person talking with Adamski, and made the plaster casts of the Space Man's footprints. Since my specialty in anthropology is ancient religion and symbolism, I did intensive research on the symbols, but the complete interpretation differs considerable from that published by you. I might also mention at this time that our group here had definite proof before we ever heard of Adamski. We learned a great deal through radio contact. I cannot give more information on this now, but mention it to show our complete faith in Prof. Adamski and his research and methods.

Anything I have mentioned in this letter may be printed or used as you may see fit.

There is much, much more information that will be released nationwide very shortly. Yes, there was a second contact made and astounding photographs were taken... Yrs. etc. - GHW Dec. 29, 1952.

Since the viii-5 no. of Round Robin will be mainly devoted to the Disc phenomena, we expect to present the above excerpts not only in the periodical mentioned, but also in all issues of Release 1-B-53 after this date - under the permission given above.

There is not the slightest doubt, in my own mind, about the "reality" and factuality of the landing and interview, or about the integrity of Dr. Williamson and Mr. Adamski. We greatly regret that they feel unable to give out more of the information in their possession. We are told by the latter that the news services have the story in reserve,- and that AF planes observed the landing of the Disc. M.L.
